Yellow (Lime) reflective tape with perforation for extra breathability offers flame retardant protection certified by EN 469. High visibility certified by EN 20471. Can be

EN 20471

This Reflective Material is a Textile Fabric coated with a layer of resin with numerous glass micro-lenses impregnated with a special glue into this layer. The light reflects from these micro-lenses and comes back to a car (or other source of light) making the person wearing reflective tape more visual in the dark.

EN 469

100% Cotton

XM SilverLine Reflective tapes and films will have longer life if you follow our care instructions.

Type of work environment, exposure conditions and maintenance have an impact on reflective performance.

Please test each tape according to appropriate care instructions required for the garment.

High-visibility clothing made with reflective material should be maintained in good condition and inspected regularly for damage or deterioration.
